## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1-9 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or render obvious a nonvolatile memory device and a method of erasing thereof with all exclusive limitations as recited in claims 1 and 8, comprising memory cells each of which comprises a storage element including a bistable molecular layer, the bistable molecular layer containing a bistable molecule having a first isomeric state and a second isomeric state, injecting a hole and an electron into the bistable molecular layer causing the bistable molecule to go into the second isomeric state, irradiating the bistable molecular layer with erase light causing the bistable molecule to go into the first isomeric state, and the memory being configured to irradiate the bistable molecular layers of all the memory cells with the erase light while applying an electric field to the bistable molecular layer of only a part of the memory cells that stores information to be held when erasing information stored in the rest of the memory cells.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Copies of the references are not being furnished with this Office Action per MPEP § 707.05(a).

U.S. Patent 6,828,685 to Stasiak discloses a memory device having a semiconducting polymer film teaching that erasing information stored in the film is achieved by electrical means or through exposure to light.
